COMPANY SNAPSHOT

In a global regulatory environment that is becoming increasingly standardized and stringent across industries, companies are at risk of irresponsible corporate practices and violating industry requirements for which they can be heavily fined. Metrix Software Solutions offers evaluation tools that review governance, risk management, and compliance (GRC) status in real-time and display it for company personnel in a user-friendly, fully-customizable dashboard. Metrix first launched its proprietary GRC software product, IsoMetrix, in the mining sector in South Africa, and has since expanded across industries and geographies.
